To the Residents Near the Intersection of Paddock and Ellis Roads

Greetings:

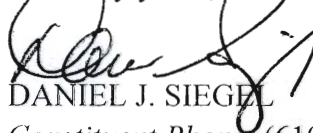

A number of your neighbors have contacted me about traffic concerns at the intersection of Paddock Road and Ellis Road. In response, I asked the Township for possible solutions. Enclosed is a copy of the October 7, 2009 letter from David Pennoni, P.E., the Township Engineer, along with recommendations for ways to "calm" the traffic at the intersection. **No decisions have been made about what, if any, methods will be used.**

Rather, the Township plans to mark the intersection in the near future based upon these recommendations and to evaluate their effectiveness. In addition, we welcome your input about these proposals so that when a solution is reached, it will be based upon (1) resident input, (2) Police feedback, and (3) analysis of the effectiveness of these measures.

Please feel free to let me know how you feel about these measures. My goal is to make sure that you – the residents who are most impacted by the traffic – are completely satisfied with whatever solution is selected.

I look forward to hearing from and working with you.

Sincerely yours,

DANIEL J. SIEGEL

October 7, 2009

Larry J. Gentile, Township Manager
Haverford Township
2325 Darby Road
Havertown, PA 19083-2251

**RE: Ellis and Paddock Roads
Traffic Calming**

Dear Mr. Gentile:

As requested, we have evaluated the referenced intersection to identify any feasible traffic calming measures that could be implemented. Attached are two (2) of the options we evaluated:

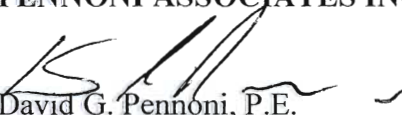

- Traffic Median, Dwg. E-1, dated 9-16-09
- Traffic Circle, Dwg. E-2, dated 9-16-09

Frankly, the intersection is not conducive to traffic calming modifications due to the configuration, grades and locations of existing driveways. However, should the Township elect to **implement any** modifications at this intersection, we recommend that Drawing E-1, Traffic Medians, **be given** first consideration. Striping the entire intersection initially, including the medians, would be advisable. Once reconfigured, the intersection could be monitored for a period of time. If it is determined that the modifications are beneficial, concrete medians can then be constructed. Also, if the medians are less than ideal, the Traffic Circle option (Drawing E-2) could be considered.

Should you have any questions, please feel free to contact me.

Very truly yours,

PENNONI ASSOCIATES INC.

David G. Pennoni, P.E.
Township Engineer
